27th July 2026

Queries Requiring Clarifications – EOI - 27

#	Clarification/ Information Required	Response
1	Will this assignment be awarded to a single firm for nationwide implementation, or will it be awarded separately on a provincial or divisional basis?	A single firm will be selected for nationwide implementation. The firm can on its own form partnerships with different organizations for its operations; however, documentation of the partnerships formed will need to be shared as proof.
2	Is there a maximum number of consortium or joint venture (JV) partners permitted in a single bid? If so, please specify the allowable limit.	There is no limit specified; however, it is advised to keep partnerships limited for better coordination and communication.
3	**Digital Solution Architecture and System Integration** • Is the implementing firm expected to deploy its own digital delivery platforms (e.g., IVR, SMS, campaign management, learning platforms), integrate with existing systems, or adopt a hybrid approach? • Which systems are expected to be within integration scope (e.g., BISP platforms, partner banks, Raast, PSPs, telecom operators, or government databases)? • At what stage will short-list firms receive interface specifications, API documentation, technical architecture, and sandbox access for solution design? • Who will own, host, maintain, and support the digital infrastructure during implementation and after project completion?	At EOI stage, bidders are only required to demonstrate capability to design and/or deploy at least one digital/technology-enabled channel (Criterion 8). The expectation for this EOI is to provide a proposed solution, decision whether it will be an independent solution or embedded into existing systems will be determined on the feasibility of the plan. At EOI stage, bidder should submit the solution that will work best for this project focused on the DFLT component only. If necessitated, the technical requirements (IF any) will be communicated. At EOI stage, bidder should submit the solution that will work best for this project focused on the DFLT component only. If necessitated, the technical requirements (IF any) will be communicated. At EOI stage, bidder should submit the solution that will work best for this project focused on the DFLT component only. If necessitated, the technical requirements (IF any) will be communicated.

#	Clarification/ Information Required	Response
4	**Digital Delivery in Low-Connectivity Environments** • How does Karandaaz define "low-connectivity environments" for implementation planning and performance expectations? • What delivery approaches are expected for beneficiaries in areas with limited or no connectivity, and are bidders expected to propose offline-first mechanisms? • How should offline learning completion, engagement, and beneficiary progress be captured and synchronized once connectivity becomes available?	Karandaaz has not prescribed a fixed technical definition of "low-connectivity" at this stage. Bidders are expected to propose their own working definition (e.g., based on mobile network coverage, 2G/3G/4G penetration, or district-level connectivity data) and a corresponding training mechanism for such regions as part of their concept note, including offline-first options where relevant (e.g., pre-loaded content, IVR/USSD, physical delivery with periodic digital reinforcement). Bidders should also propose their own approach to capturing and later synchronizing offline learning/engagement data; the final approach and any minimum data-quality/synchronization standards will be agreed during the TORs/RFP stage.
5	**Beneficiary Accounts and Digital Financial Access** • Please clarify the expected beneficiary account model, onboarding workflow, applicable KYC requirements, account activation process, and responsibility for handling failed onboarding, dormant accounts, PIN resets, and beneficiary support. • Are beneficiaries expected to access their accounts primarily through mobile applications, branchless banking agents, USSD, ATM/debit cards, or a combination of channels?	At EOI stage, bidders should demonstrate general familiarity with Pakistan's branchless banking/mobile wallet ecosystem and relevant prior experience (Section 5). Responsibility for account-level issues such as PIN resets and dormancy will primarily rest with BISP and the account-holding financial institutions; the training firm's role is expected to focus on beneficiary awareness, first-time usage support and referral/escalation pathways for such issues.
6	**Digital Payments and Raast Ecosystem** • Should bidders assume Raast as the primary payment rail only, or should training also cover other digital payment channels and partner banking/PSP ecosystems? • Will the implementing firm require any direct integration with Raast, or will all payment	Training content should not be limited to Raast alone; it should cover the broader digital financial services ecosystem beneficiaries are likely to encounter, since accounts may be held with different partner banks/PSPs. The training firm is not expected to directly integrate with Raast or any payment rail – all such integrations will be managed by BISP and the participating financial institutions. The firm's role is capability-building and beneficiary support, not payment-system integration. BISP's digital

#	Clarification/ Information Required	Response
	integrations be managed through partner financial institutions?	transformation journey, which is public information, should be considered a point of reference to understand the kind of capacity building activities that will be required to onboard, train, and equip beneficiaries with the new disbursements process (receiving funds in their mobile wallets).
7	• Mobile Devices, SIMs, and Connectivity • What assumptions should bidders make regarding provision of SIM cards, mobile devices, connectivity, airtime, or data support for beneficiaries? • Are bidders expected to assume that beneficiaries already possess mobile phones and SIMs registered against their CNICs, or should alternative onboarding scenarios be incorporated?	Bidders should assume, consistent with Section 2 of the EOI, that beneficiaries are generally expected to already possess (or have access to) mobile phones and SIMs registered against their own CNICs, as this underpins the account/wallet model being introduced. Provision of devices, SIM cards, connectivity, airtime or data support to beneficiaries is not within the scope or budget of this assignment. Bidders should, however, propose reasonable alternative approaches (e.g., household/agent-assisted access, shared-device protocols) for the segment of beneficiaries who may not have independent phone access, as part of their technical approach.
8	• Geographic Coverage and Beneficiary Allocation • Is there an indicative provincial, district, or regional distribution of the approximately one million beneficiaries? • Will BISP provide the beneficiary list and implementation sequencing, or are bidders expected to propose a targeting and segmentation methodology? • Should bidders assume differentiated implementation models for urban, peri-urban, and remote rural populations?	No, there is not an indicative distribution for the one million beneficiaries. At EOI stage, bidders should propose their own general targeting/segmentation methodology and demonstrate the operational reach to deliver a multi-region program (Criteria 9, 10, 12). Yes, differentiated implementation models for urban, peri-urban and remote rural populations are expected and will be positively assessed as part of the technical approach at shortlisting/RFP stage.
9	**Training Delivery Model** • Does Karandaaz have any expectations regarding the balance between physical and digital delivery, or should bidders independently determine the most appropriate blended model? • Should training include structured post-training reinforcement and follow-up engagement as part of the beneficiary journey?	Karandaaz has not fixed a mandatory physical-to-digital ratio. As set out in Section 4, bidders are expected to independently propose and justify a context-appropriate blended (physical/digital) modality split as part of their rollout strategy and concept note. Yes – structured post-training digital reinforcement and onboarding/follow-up support is an explicit part of the intended scope (Section 4) and should be reflected in the proposed approach.

#	Clarification/ Information Required	Response
10	**Phased Rollout and Performance Management** • How many implementation phases are currently envisaged, and what are the indicative beneficiary volumes for each phase? • What key performance indicators and review criteria will determine progression between implementation phases? • If agreed performance thresholds are not achieved, what contractual or implementation implications should bidders anticipate? • Is there provision to recalibrate implementation modalities, KPIs, or rollout sequencing based on learning from earlier phases? • Are there any fixed implementation milestones linked to BISP operational timelines, donor commitments, or government policy decisions?	The program is confirmed to follow a phased rollout with a structured review and course-correction gate between phases (Section 4), but the exact number of phases, per-phase beneficiary volumes, KPIs and any performance-linked contractual implications can be decided by the bidder as per their understanding. Bidders may propose an indicative phasing approach in their concept note. Yes, based on the learnings from implementation, provision can be recalibrated. Also yes, there is a plan under development for BISP's operational requirement, however the bidder is expected to submit an indicative plan for implementation, based on their understanding.
11	**Capacity Building and Master Trainer Model** • Is the implementing firm expected to design the Master Trainer certification framework, competency model, assessment methodology, and sustainability plan, or will these be provided by Karandaaz/BISP? • Approximately how many Master Trainers are expected to be trained and certified under the assignment?	The selected firm is expected to design the Master Trainer certification framework, competency model, assessment methodology and sustainability plan as part of the Training of Trainers (ToT) component under Section 4, in consultation with and subject to approval by Karandaaz/BISP – this is not something Karandaaz/BISP will hand over ready-made. Approximately 1200 of Master Trainers to be certified under the assignment.
12	**Curriculum Design and Localization** • What mandatory curriculum modules should all bidders include (e.g., account usage, digital payments, fraud awareness, financial capability, budgeting, grievance handling)?	At minimum, the curriculum is expected to cover account usage/onboarding, basic digital transactions, fraud/scam awareness, financial capability and budgeting, and grievance/complaint-handling pathways, consistent with Section 3's objectives; the detailed, mandatory module list will be finalized following the baseline assessment and beneficiary segmentation described in Section 4. Content must be

#	Clarification/ Information Required	Response
	• What languages and localization requirements should bidders assume, including any mandatory regional language adaptations?	localized and gender-intentional (Section 4); bidders should assume the need for Urdu plus relevant regional/provincial languages appropriate to beneficiary demographics, with the specific language set to be confirmed based on the final geographic distribution shared by the bidder.
13	**Monitoring, Evaluation, and Success Measurement** • Will Karandaaz provide a Monitoring, Evaluation and Learning (MEL) framework, or should bidders develop the framework as part of their technical approach? • How will key outcomes such as successful onboarding, first digital transaction, and sustained account usage be defined and measured? • Will independent verification or third-party evaluation be conducted alongside the implementing firm's reporting responsibilities?	No such MEL framework will be provided by Karandaaz. While a third- party MEL firm will be hired for the project, the bidder is expected to clearly identify indicators that will be captured as metrics of success for the delivery and completion of training. The same indicators will then inform the third-party MEL firm. The premise around outcomes will be specified in the RFP/TORs stage. Bidders can propose their own definitions for this EOI. Yes, a third-party will be conducting M&E for the project. Bidders will solely have reporting responsibilities.
14	**. Data Governance and Information Security** • What data protection, cybersecurity, hosting, and regulatory compliance requirements will apply to the project? • Who will own the beneficiary data, analytical outputs, training content, and any digital assets or software developed under the assignment? • What data retention, archival, and post-project handover requirements should bidders assume?	Applicable data protection, cybersecurity and regulatory requirements will be based on SBP and PTA regulatory provisions, and BISP's own data policies. As a general principle, beneficiary data remains the property of BISP, and training content, digital assets and software developed specifically for this assignment are expected to vest in Karandaaz/BISP on completion. All material developed, data collected will be handed over to BISP at the end of the project.
15	**Consortium Eligibility and Commercial Requirements** • For consortium or joint venture submissions, may the minimum experience requirements be satisfied collectively, or must the lead organization independently meet all eligibility criteria? • Will the experience of named subcontractors or technical partners be considered where they are not formal consortium members? • If FY2024–25 audited financial statements are not yet available, what alternative financial documentation will be acceptable at the EOI stage?	Criteria 4–11 may generally be evidenced on an aggregate basis across the consortium as a whole, provided the combined experience/capability is clearly attributable to specific, named consortium members and supported by verifiable evidence/references for each contributing member; the lead entity is not required to independently satisfy every criterion on its own. The lead entity is required to submit their audited financial statements for FY 2024-25 and other consortium members are encouraged, though not strictly mandatory, to also provide their audited financial statements for FY 2024-25, as combined financial standing may be considered during Stage 2 shortlisting. To avoid conflicts of interest and ensure a level playing field, an entity may not be a member of more than one consortium bidding on this EOI, and may not simultaneously bid as an

#	Clarification/ Information Required	Response
	• Will financial standing at the EOI stage be assessed solely for eligibility purposes or also as part of comparative shortlisting?	individual applicant and as a member of a consortium. It is also clarified that subcontracting is not permitted under this EOI.
16	**Field Operations and Stakeholder Coordination** • What implementation support will be provided by BISP for beneficiary mobilization, scheduling, venue access, and field coordination? • Will engagement with partner banks, payment service providers, telecom operators, and agent networks be coordinated centrally by Karandaaz/BISP, or should bidders establish and manage these partnerships independently? • What assumptions should bidders make for implementation in remote, conservative, or higher-risk districts with respect to staffing, mobility, supervision, and operating arrangements? **Safeguarding, Risk Management, and Commercial Assumptions** • What safeguarding, protection, gender, and do-no-harm requirements will apply throughout implementation? • What security protocols or operational restrictions should bidders assume for work in higher-risk locations? • Are there any budget categories that bidders should consider ineligible or subject to funding limits (e.g., devices, connectivity, beneficiary incentives, hardware support, or other capital expenditures)? • How should bidders treat security-related implementation costs (such as secure transport, insurance, or additional field protection measures) where these become necessary?	BISP will remain a critical partner throughout the project design and implementation phase. Venue access, and field coordination support will be provided by them, however the expectation from the bidding firm is to come with an approach and implementation plan for the capacity building of beneficiaries, following the transition from LMA to a mobile wallet. At this stage, the key consideration should be to propose an effective sustainable and efficient training program. Specific role of each partner will be determined at the next inception stage, with mutual consent. The bidder should present a plan according to Pakistan's geographical context. As far as the funding limits are concerned, there are no specific parameters but the bidder is not expected to provide beneficiaries with sims, devices or any other hardware for the project. The plan expected as a result of this EOI should be generic based on what approach will work best to train beneficiaries to use a wallet etc. If incentive makes commercial sense to the overall approach along with a sustainability plan, then bidders may propose it.
17	**Commercial and Contractual Clarifications** • Will an initial pilot or proof-of-concept phase be required prior to full-scale rollout, and if so, will	Consistent with the phased, gated rollout described in Section 4, an initial pilot/proof-of-concept phase prior to full-scale rollout is likely, with

#	Clarification/ Information Required	Response
	pilot performance determine progression to subsequent phases? • Will payment under the subsequent contract be milestone-based, deliverable-based, beneficiary-volume-based, outcome-based, or structured through another payment mechanism? • Does Karandaaz already possess training curricula, communication materials, branding guidelines, behavioural frameworks, or previous research that will be made available to the selected firm, or should bidders assume these will be developed from the ground up? • Who will own the intellectual property rights relating to training materials, digital content, software, dashboards, videos, and other project deliverables developed during the assignment?	progression to subsequent phases linked to agreed performance thresholds. The payment structure milestone-based, deliverable-based, or a combination, potentially incorporating performance/outcome elements and finalized during contract negotiation with the selected firm – bidders should not assume a specific mechanism at EOI stage. Karandaaz does not currently have a ready-made curriculum, communication package or behavioural framework specific to this program; any relevant existing research or reference material available with Karandaaz/BISP will be shared with the selected firm as a starting reference inception stage, but the firm is expected to lead design and development of the curriculum and content. Intellectual property in materials, content, software, dashboards and other deliverables developed specifically for this assignment is expected to vest in Karandaaz/BISP, with exact terms set out in the contract.
18	**Eligibility and consortium structure** Criteria 1 and 2 specify "single entity or lead entity," while criteria 4 to 11 do not carry a comparable qualifier. Please confirm whether these criteria may be evidenced on an aggregate basis across consortium members, or whether the lead entity must satisfy each criterion independently. Please confirm whether audited financial statements for the year 2024-25 (Criterion 10) are required from each consortium member, or from the lead entity only. Please confirm whether an entity may participate as a member of more than one consortium responding to this EOI, or as both a consortium member and an individual applicant.	As above, minimum experience requirements under Criteria 4–8 may be satisfied collectively across formal consortium members, clearly attributed and evidenced by either a Letter of Intent or a signed consortium/joint venture Agreement. The lead entity is not required to independently meet every criterion alone. The experience of named technical partners who are not formal consortium members may be referenced in the concept note as supporting context, but will not be counted toward satisfying the mandatory eligibility criteria – only formal consortium members' experience is creditable at Stage 1. The lead entity is required to submit their audited financial statements for FY 2024-25 and other consortium members are encouraged, though not strictly mandatory, to also provide their audited financial statements for FY 2024-25 Karandaaz reserves the right to request the finalized audited statements before contract award. Financial standing is assessed both for pass/fail eligibility at Stage 1 and as a factor in comparative shortlisting at Stage 2, given the scale of mobilization required for this assignment. The entity may only be a part of only one consortium responding to this EOI.

#	Clarification/ Information Required	Response
19	Section 3 refers to a certified pool of BISP master trainers, while Section 4 places training delivery to approximately one million beneficiaries within the selected firm's scope. Please clarify the anticipated division of delivery responsibility, in particular whether BISP is expected to provide master trainers, district or tehsil-level field personnel, training venues, and beneficiary contact lists, and how the associated costs are expected to be borne. 5. In relation to the objective that beneficiaries transition to active and sustained usage of digital financial services, please clarify how sustained usage is expected to be defined and measured, and whether the selected firm will be provided access to transaction-level data from BISP or participating financial service providers for the purpose of evidencing this outcome.	The anticipated model is that the selected firm designs and delivers the Training of Trainers (ToT) programme and certifies BISP staff as master trainers (building BISP's own institutional capacity), while the firm itself – through its own field teams and/or consortium/partner network – remains responsible for the large-scale direct delivery of training to beneficiaries. BISP is expected to support with beneficiary contact lists/sequencing, designation of staff for the master trainer track, and facilitation of venue access/coordination at the district level; the firm is expected to resource its own field delivery personnel along to accompany BISP master trainers for this project. The premise around outcomes will be specified in the RFP/TORs stage. Bidders can propose their own definitions for this EOI. Yes, a third-party will be conducting M&E for the project. Bidders will solely have reporting responsibilities. Any access by the selected firm to transaction-level data from BISP or participating financial institutions to evidence this outcome will depend on data-sharing arrangements between BISP and those institutions, and will be clarified at that stage – it should not be assumed as available by default. A framework for data sharing will be developed and agreed upon at
20	Mandatory criteria 4, 5 and 6 – representation for consideration on the strength of key personnel. The bidder is a recently established organization. Its proposed team, however, comprises senior professionals, each carrying 20–30 years of experience, who have individually designed and implemented the very class of programs these criteria contemplate – including the operations of BISP and similar national social safety net programs, women-centric programs, and large-scale training initiatives. The substantive capability that the mandatory criteria seek to assure therefore rests fully and demonstrably with the proposed team, whose availability to the assignment will stand certified under Annexure A. We note further that Section 5 of the EOI itself provides that the required competencies are to be demonstrated "supported by CVs, project references, and a description of relevant experience." We would accordingly	Criteria 4, 5 and 6 are entity-level (or, for consortiums, consortium-level) eligibility requirements and are assessed on that basis; the CVs, project references and experience descriptions referred to in Section 5 are intended as supporting evidence of the entity's/consortium's own track record, not as a substitute for it. Individual personnel experience, however strong, cannot on its own satisfy an entity-level eligibility criterion. A newly established organization wishing to rely on this depth of individual expertise is encouraged to bid as part of a consortium with one or more organizations that can independently evidence the required entity-level track record (Criteria 4–6); the strength of the proposed personnel would then be a significant positive factor at the Stage 2 shortlisting/technical evaluation, but cannot itself waive the Stage 1 mandatory entity-level requirements.

#	Clarification/ Information Required	Response
	submit, with respect, that the documented experience and client references of the proposed key personnel be accepted in satisfaction of criteria 4, 5 and 6, and that the entity-level track record requirement be set aside in the case of a newly established organization deploying a team of this depth. Kindly confirm whether Karandaaz Pakistan will consider eligibility on this basis.	
21	The cover page states: • Last date for queries: 27 July 2026 • Response to queries: 29 July 2026 However, Section 9 states that queries must be submitted by 22 July 2026, while Section 10 states that responses will be uploaded on 27 July 2026	The dates provided in Sections 9 and 10 of the EOI were incorrectly stated. The correct deadline for the submission of queries was 27 July 2026, and responses to the queries will be issued on 29 July 2026. Accordingly, the dates provided on the cover page of the EOI shall prevail and should be followed.
22	Please confirm whether criteria 4–11 may be satisfied collectively by the consortium, or whether the consortium partners must independently meet all the criteria.	As clarified in the response to Query 17/18 above, Criteria 4–11 may be satisfied collectively across the consortium as a whole, with each contributing member's share of the experience/capability clearly identified and evidenced; individual partners are not each required to independently meet every criterion in full.
23	Please confirm whether a signed letter of intent between consortium members is sufficient at the EOI stage, or whether a formal, stamped or notarized consortium/JV agreement is required.	A signed Letter of Intent (LOI) between consortium members, clearly defining roles, responsibilities and coordination mechanisms as required under Section 6, is sufficient at the EOI stage. The Letter of Intent should be signed by the authorized representative of each consortium member. A formal, stamped/notarized consortium or JV agreement is not mandatory at this stage but will be required if the consortium is shortlisted and proceeds to contract award.
24	Whether financial statements are required only from the lead entity or from every consortium member.	Audited financial statements for FY 2024-25 are required, at minimum, from the lead entity. Consortium members are encouraged, though not mandatorily required, to also submit theirs, as this may strengthen the overall assessment of the consortium's collective financial standing at later stage.
25	Criteria 9 and 11 require multi-region field presence, nationwide operational capacity and a list of local and regional offices. Can a firm demonstrate capacity through field teams, provincial partners,	Yes. Multi-region operational capacity may be demonstrated through a credible combination of the firm's own field teams, provincial/local partners, consortium members, and temporary field offices established specifically for the assignment, together with a well-substantiated

#	Clarification/ Information Required	Response
	consortium members, temporary field offices and a credible nationwide deployment plan.	nationwide deployment plan. Permanent, pre-existing offices in every province are not a mandatory requirement, provided the overall deployment plan and supporting arrangements are credible and adequately resourced.
26	Please confirm whether Annexure A and Annexure B should be signed by the lead entity on behalf of the entire consortium or should be signed separately by both partners.	Annexure A may be signed by the lead entity on behalf of the consortium, provided that the lead entity is duly authorized to do so. Where the lead entity is not so authorized, Annexure A should be signed separately by each consortium member. Annexure B is to be signed separately by the authorized representative of each consortium member.
27	Please clarify what evidence will be accepted for the two comparable assignments and other experience claims	Acceptable evidence includes signed client reference letters, contract completion/performance certificates, or copies of the relevant award/contract letters. Where such formal documentation is not available, a firm-issued project summary is acceptable, provided it includes the client name, contract value, duration, a description of scope/results, and a client contact who can be reached for verification. Karandaaz reserves the right to independently verify any claimed experience directly with the named client/reference.
28	Please confirm what supporting evidence is expected for experience with IVR, SMS, short-form video or digital media.	The same evidentiary standard applies as for other experience claims (see response to Query 27): project completion certificates or client references, together with representative samples of the deployed content/channel (e.g., links, screenshots, recordings) and a brief note on the scale/reach achieved. Self-declaration alone, without any of the above supporting evidence, will not be considered sufficient to meet Criterion 8.
29	**Maximum number of JV/consortium partners** The EOI does not specify a cap on the number of entities that may form a consortium/joint venture. Kindly confirm if any maximum applies.	There is no maximum limit on the number of entities that may form a consortium/joint venture. It is advised that consortium/joint venture members are limited to ensure coordination and communication.
30	**Eligibility of financial institutions/mobile wallet operators** Are financial institutions or mobile wallet operators (e.g., microfinance banks, telecom-linked wallet providers) eligible to participate as formal JV partners, or would such involvement be more appropriately structured as a support/ecosystem partnership outside the JV, given Karandaaz's conflict-of-interest policy — particularly where the entity may have an existing engagement with Karandaaz under another program vertical	The financial institutions or mobile wallet operators are eligible to participate as formal JV partners or support/ecosystem partners provided that they are not providing goods, works or non-consulting services resulting from or directly related to consulting services for the preparation or implementation of the project that it provided or were provided by any affiliate that directly or indirectly controls, is controlled by, or is under common control with that

31	**Combined vs. individual eligibility across JV members** For mandatory criteria such as #4 (5+ years designing/implementing financial/digital literacy programs) and #5 (2+ women-centric assignments), can these be satisfied by the consortium collectively, or must each individual JV member independently meet every mandatory criterion?	Criteria 4 and 5 may be evidenced on an aggregate basis across the consortium/joint venture as a whole, provided the combined experience/capability is clearly attributable to specific, named consortium/joint venture members and is supported by verifiable evidence/references for each contributing member. Each consortium/joint venture member is not required to independently satisfy every criterion on
32	**Financial standing documentation (#10)** Should audited financial statements or other evidence of financial standing be submitted for the lead entity only, for all JV members individually, or on a consolidated basis for the consortium as a whole?	The lead entity is required to submit their audited financial statements for FY 2024-25 and other joint venture members are encouraged, though not strictly mandatory, to also provide their audited financial statements for FY 2024-25, as the joint venture's combined financial standing may be considered during Stage 2 shortlisting. If the joint venture itself is a registered/incorporated legal entity that was established before FY 2024–25,
33	**Local/regional office presence (#11)** Can operational/field presence be demonstrated collectively across JV members, or must each member independently show local office presence?	Yes. Multi-region operational capacity may be demonstrated through a credible combination of the firm's own field teams, provincial/local partners, consortium members, and temporary field offices established specifically for the assignment, together with a well-substantiated nationwide deployment plan. Permanent, pre-existing offices in every province are not a mandatory requirement, provided the overall deployment plan and supporting
34	**Annexures A and B** Should these undertakings be signed once by the lead entity on behalf of the consortium, or does each JV member need to submit its own signed copy?	Annexure A may be signed by the lead entity on behalf of the consortium/joint venture, provided that the lead entity is duly authorized to do so. Where the lead entity is not so authorized, Annexure A should be signed separately by each consortium/joint venture member. Annexure B is to be signed separately by the authorized representative of each consortium/joint venture member.
35	Support/ecosystem partners vs. formal JV members Can a firm be named as a technical/ecosystem support partner (e.g., providing agent network or channel access) without being a formal JV member sharing contractual liability, and if so, how should this distinction be documented in the submission?	Firms may act as technical/ecosystem support partners. However, they must be formal members of a consortium/joint venture. Please note that subcontracting is not permitted.
36	Exclusivity across competing consortia Is an entity permitted to be part of only one consortium bidding on this EOI, or may a partner be named in more than one competing JV?	An entity may participate in only one bid, whether as a single bidder or as a member of a consortium/joint venture. Partnership firms or similar entities which work under common brand name or a part of affiliated network will be regarded as single entity and may not participate in more than one bid. Similarly associates and subsidiaries of an entity will be regarded as a part of a group and may not participate in multiple bids.
